WORK EXPERIENCE

- Cloudflare** | *Red Team Engineer* Jun 2025 - May 2026
- Discovered and successfully exploited a **Remote Code Execution (RCE)** vulnerability within internal tools.
 - Designed and executed **targeted phishing** campaigns to assess employee security awareness and organizational resilience.
 - Architected and deployed evasive **C2 infrastructure** using TypeScript, Workers, R2, and KV to simulate APT techniques.
 - Evaluated SIRT defenses, **identifying detection gaps** and providing actionable remediation guidance.
- NEIIST** | *Dev Team Collaborator* Apr 2026 - Present
- Developing the university engineering students' web platform with **React.js**, supporting large-scale events, academic workshops, and community engagement initiatives.
 - Resolving software bugs** and **implementing security best practices** to harden the association's digital infrastructure.
- Paldata** | *SOC Analyst* Jan 2025 - May 2025
- Investigated security incidents using **Cortex XSIAM** and automated routine triage tasks to reduce response time.
 - Developed **Python scripts** for automated client notifications and assisted in building custom detection rules.
- Caixa Mágica Software** | *Software Engineer Intern* Jun 2024 - Sep 2024
- Developed a full-stack digital comic reader using **React Native** with a custom panel-by-panel processing engine.
 - Engineered the application for **cross-platform compatibility**, ensuring deployment on iOS and Android.

PROJECTS

- DeathNode** | *Java, Cryptography, Multi-VM*
- Built a secure P2P reporting platform with **AES-256 encryption** and **multi-VM isolation** for data integrity.
- AutoAttendance** | *Reverse Engineering, Android, Java*
- Reverse engineered a university mobile app to **automate attendance check-ins** using custom Android logic.
- Smalito** | *TypeScript, Cloudflare Toolkit (D1, KV, R2)*
- Built a full-stack SaaS **URL shortener** featuring **Stripe subscriptions**, user authentication, analytics, and edge-native storage via Cloudflare D1/KV.
- Simple Onion Router** | *TypeScript, Networking*
- Developed a simulated **onion routing network** with client, registry, and relay nodes to enable **anonymous communication**.
- Space Invaders AI** | *Java, Neural Networks, Genetic Algorithms*
- Created an autonomous AI agent capable of playing Space Invaders using neural networks and evolutionary training.

EDUCATION

- Instituto Superior Técnico** | *MSc in Computer and Informatics Engineering* Sep 2025 - Present
- Specialization:** Cybersecurity (Network security, AppSec, Cryptography, and Forensics).
 - Coursework and projects focused on offensive/defensive security and secure software engineering.
- Association Leonard De Vinci - ESILV** | *MSc in Cybersecurity and Cloud Computing* Jan 2024 - May 2024
- Exchange Semester:** Gained advanced knowledge in pentesting and secure cloud infrastructure.
 - DeVinciCode CTF Team:** Participated in CTFs focusing on web exploitation and reverse engineering.
- ISCTE** | *BSc in Computer Engineering and Telecommunications* Sep 2022 - Jun 2025
- Key Grades:** Object-Oriented Programming (19/20), Computer Architecture (18/20).
 - CarpeDien CTF Team:** Achieved 3rd place in Portugal on CTFTIME (2024).
 - Contributed to the organization of FISTA 2024, a major cybersecurity CTF event at ISCTE.

SKILLS

Cybersecurity	Red Teaming, Reverse Engineering, Web Exploitation, Incident Response, C2 Infrastructure
Programming	Python, Go, C, Java, TypeScript, JavaScript, React Native
Certifications	Cisco CyberOps Associate, Cisco Intro to Cybersecurity, TryHackMe PT1 (In Progress)
Languages	Portuguese, English
Hobbies	Travelling, football, playing the piano, video games (PC gamer), and competing in CTFs.
